

Hydrologic Cycle key words:

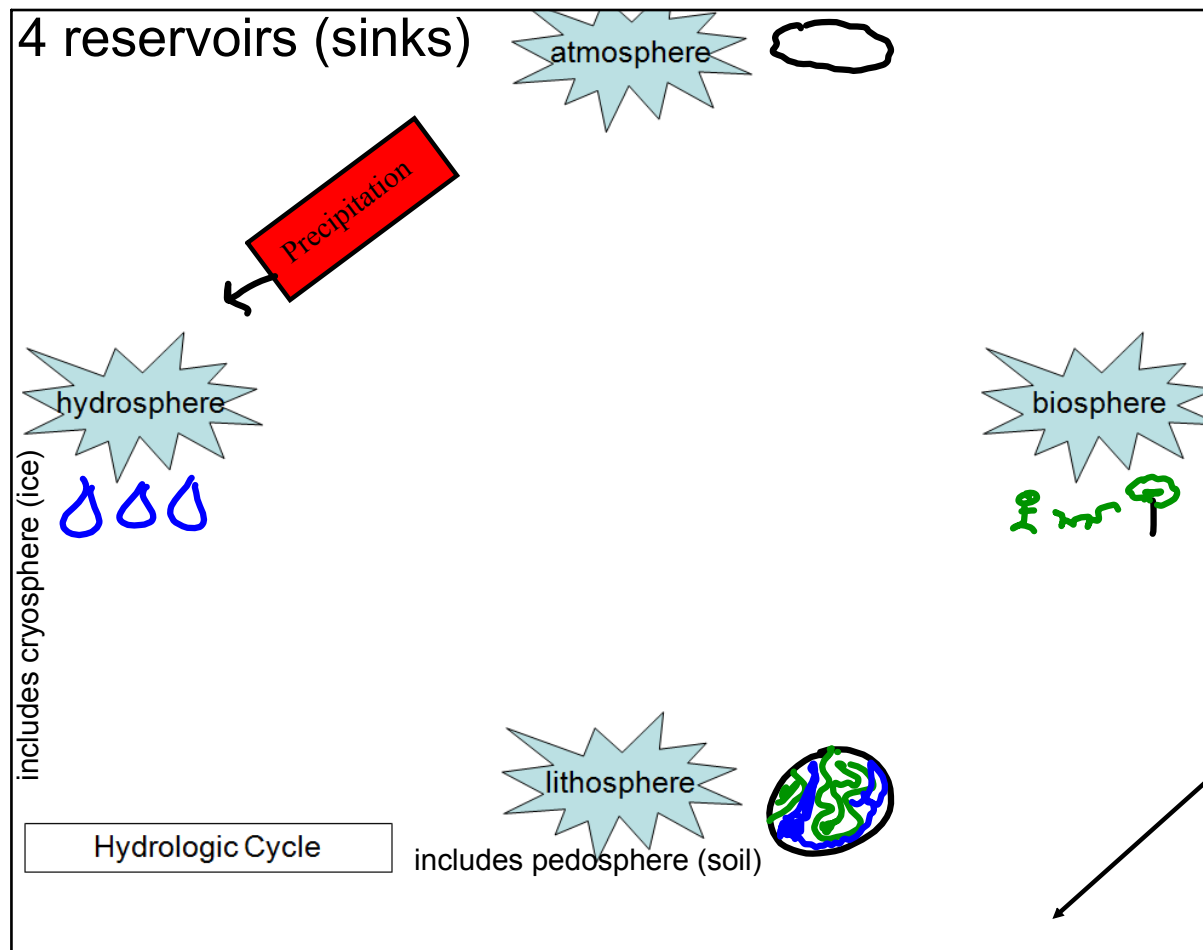

effluent - "outflow"; cleaned water that is released into rivers from water treatment plants

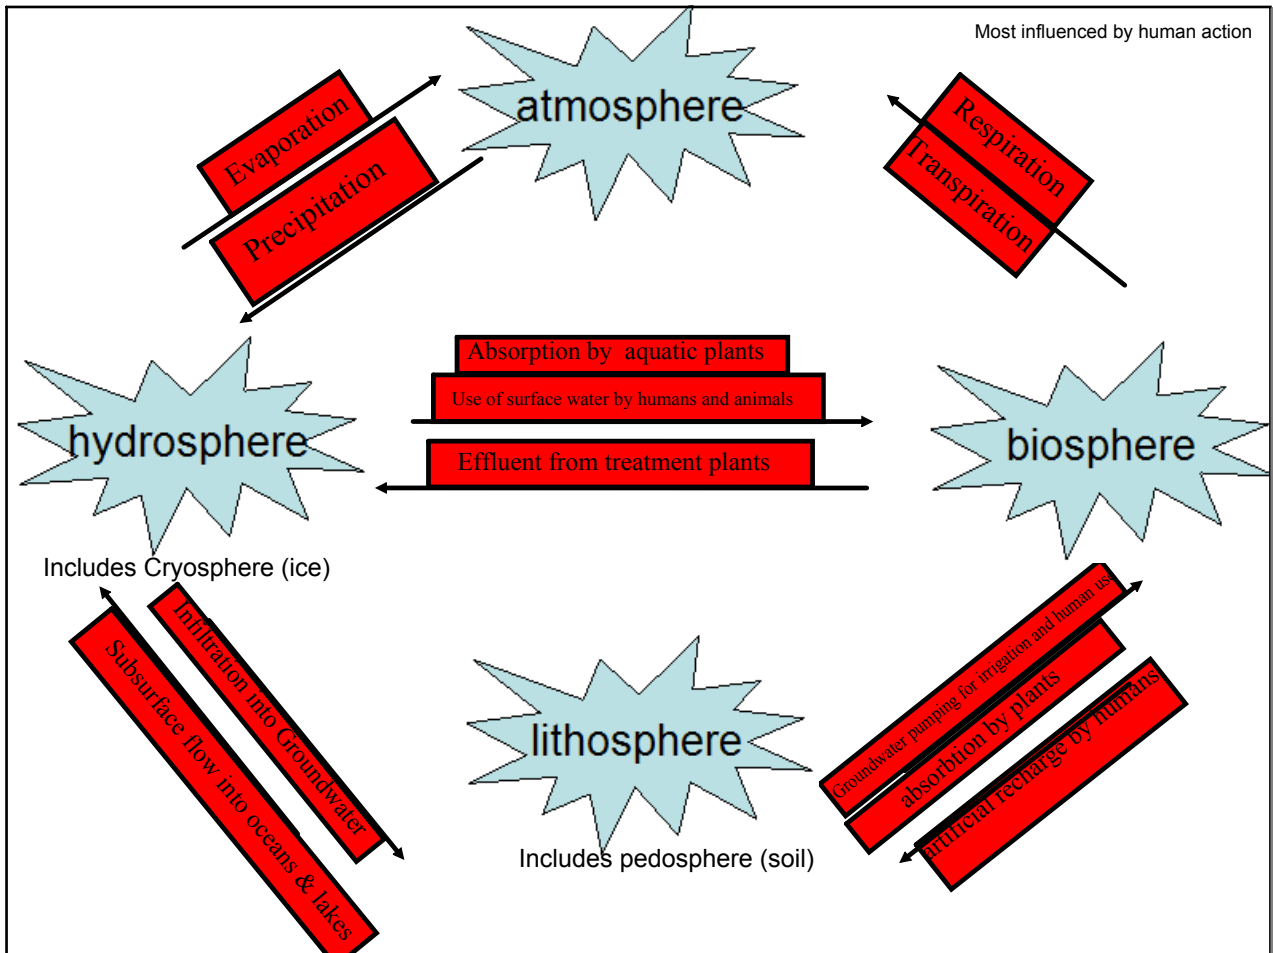

transpiration - water vapor released by the leaves of plants

respiration - breathing by animals

surface water - lakes, rivers, ponds, puddles, etc.

infiltration - water soaking into the ground

atmosphere

hydrologic cycle

hydrophere

precipitation

biosphere

lithosphere

Hydrologic Cycle

Cut out the strips of paper that describe the water cycle. Use page 86 in the textbook to help you tape the strips down to this paper. Don't forget your arrows to show the direction of flux.
